BioSystems, 24 (1991) 325–327
Elsevier Scientific Publishers Ireland Ltd.

Subject Index
Volume 24

acetylcholine level, metabolic regulation, substrate influx rates, non-steady-state behavior, computer simulation, 183
actomyocin, *Physarum*, mechanics, autowaves, mathematical model, 269
adaptation (molecular mechanism), protein phosphorylation, adaptive evolution, 53
adaptive evolution, protein phosphorylation, adaptation (molecular mechanism), 53
adaptive landscape, evolution, stability, complexity, structuralism, evolvability, 61
aggregation of a bacterial population, density dependent diffusion, conflicting dynamics, *Escherichia coli* and *Streptococcus faecalis* radial growth, travelling waves, 215
aggregation of populations, density dependent diffusion, dispersal of populations, *Rhizobium* spp. motility, nitrogen fixation by symbiotic *Rhizobium*, 223
amino acids code partitioning, genetic code, genetic code degeneracy, generalized information, 239
artificial neuron, switching device, mathematical model, computer simulation, cyclic enzyme system, 39
autowaves, actomyocin, *Physarum*, mechanics, mathematical model, 269
axonemes, calmodulin, centrin, kinetids, kinetosome DNA, kinetosomes, sperm tails, *Spirochaeta halophila*, tektin and tektin-like proteins, undulipodia, 313

Bangia, fossil rhodophyte, late Proterozoic microfossil, *Johannesbaptistia*, silicified stromatolite, 245
bifurcation, speciation, phase transition, evolution, 301
bistability, metabolic oscillations, mitochondrial role in development, 255
blood oxygenation, lung capillaries, facilitated diffusion, mathematical model, oxygen dissociation curve, *n*th order one-step kinetics, computer simulation, 209

C_0t analysis, *Chlorella*, kinetic complexity, repetitive DNA, single copy DNA, thermal denaturation, 145
calmodulin, axonemes, centrin, kinetids, kinetosome DNA, kinetosomes, sperm tails, *Spirochaeta halophila*, tektin and tektin-like proteins, undulipodia, 313
cellular automata, computer biological modelling, self-organization, 99
cell biology, cytokinetics, stochastic simulation, 193
cell cycle, MPF, cyclin, oscillator, 85
centrin, axonemes, calmodulin, kinetids, kinetosome DNA, kinetosomes, sperm tails, *Spirochaeta halophila*, tektin and tektin-like proteins, undulipodia, 313
Chlorella, C_0t analysis, kinetic complexity, repetitive DNA, single copy DNA, thermal denaturation, 145
ciliate encystment, cryptobiosis, generalized model, 17
complexity, evolution, adaptive landscape, stability, structuralism, evolvability, 61
computer biological modelling, self-organization, cellular automata, 99
computer simulation, blood oxygenation, lung capillaries, facilitated diffusion, mathematical model, oxygen dissociation curve, *n*th order one-step kinetics, 209
computer simulation, metabolic regulation, acetylcholine level, substrate influx rates, non-steady-state behavior, 183
computer simulation, switching device, artificial neuron, mathematical model, cyclic enzyme system, 39
conflicting dynamics, density dependent diffusion, aggregation of a bacterial population, *Escherichia coli* and *Streptococcus faecalis* radial growth, travelling waves, 215
control, self-fertilizing and selection process of breeding, modelling, simulation, 291
cryptobiosis, ciliate encystment, generalized model, 17
cyclic enzyme system, switching device, artificial neuron, mathematical model, computer simulation, 39
cyclin, cell cycle, MPF, oscillator, 85
cytokinetics, stochastic simulation, cell biology, 193
cytotaxonomy, karyotype, phylogeny, 157

density dependent diffusion, conflicting dynamics, aggregation of a bacterial population, *Escherichia coli* and *Streptococcus faecalis* radial growth, travelling waves, 215
density dependent diffusion, dispersal of populations, aggregation of populations, *Rhizobium* spp. motility, nitrogen fixation by symbiotic *Rhizobium*, 223
dispersal of populations, density dependent diffusion, aggregation of populations, *Rhizobium* spp. motility, nitrogen fixation by symbiotic *Rhizobium*, 223

electrophoretic sorting, hypothesis, pH gradient, structure of cytosol, 127
enzyme kinetics, peptide polymerization, equilibrium solutions, 177
equilibrium solutions, peptide polymerization, enzyme kinetics, 177
Escherichia coli and *Streptococcus faecalis* radial growth, density dependent diffusion, conflicting dynamics, aggregation of a bacterial population, travelling waves, 215
evolution, adaptive landscape, stability, complexity, structuralism, evolvability, 61

evolution, speciation, phase transition, bifurcation, 301
evolvability, evolution, adaptive landscape, stability, complexity, structuralism, 61

facilitated diffusion, blood oxygenation, lung capillaries, mathematical model, oxygen dissociation curve, *n*th order one-step kinetics, computer simulation, 209
ferrocyanide, proton gradient, liposomes, 1
fossil rhodophyte, *Bangia*, late Proterozoic microfossil, *Johannesbaptistia*, silicified stromatolite, 245

generalized information, amino acids code partitioning, genetic code, genetic code degeneracy, 239
generalized model, cryptobiosis, ciliate encystment, 17
genetic code, amino acids code partitioning, genetic code degeneracy, generalized information, 239
genetic code degeneracy, amino acids code partitioning, genetic code, generalized information, 239

Hpof bifurcation, oscillations, limit cycle, 31
hypothesis, pH gradient, electrophoretic sorting, structure of cytosol, 127

immune response, protein-folding, skew distribution, 261
ionic channel, local anesthetics, protein cross-linking, procaine, non-archimedean model, time scales, 91

Johannesbaptistia, *Bangia*, fossil rhodophyte, late Proterozoic microfossil, silicified stromatolite, 245

karyotype, cytotaxonomy, phylogeny, 157
kinetic complexity, *Chlorella*, C_0t analysis, repetitive DNA, single copy DNA, thermal denaturation, 145
kinetids, axonemes, calmodulin, centrin, kinetosome DNA, kinetosomes, sperm tails, *Spirochaeta halophila*, tektin and tektin-like proteins, undulipodia, 313
kinetosomes, axonemes, calmodulin, centrin, kinetids, kinetosome DNA, sperm tails, *Spirochaeta halophila*, tektin and tektin-like proteins, undulipodia, 313
kinetosome DNA, axonemes, calmodulin, centrin, kinetids, kinetosomes, sperm tails, *Spirochaeta halophila*, tektin and tektin-like proteins, undulipodia, 313

late Proterozoic microfossil, *Bangia*, fossil rhodophyte, *Johannesbaptistia*, silicified stromatolite, 245
life expectancy curves, pedicitive model, 119
limit cycle, oscillations, Hpof bifurcation, 31
liposomes, proton gradient, ferrocyanide, 1
local anesthetics, protein cross-linking, procaine, ionic channel, non-archimedean model, time scales, 91
lung capillaries, blood oxygenation, facilitated diffusion, mathematical model, oxygen dissociation curve, *n*th order one-step kinetics, computer simulation, 209

mathematical model, actomyocin, *Physarum*, mechanics, autowaves, 269
mathematical model, blood oxygenation, lung capillaries, facilitated diffusion, oxygen dissociation curve, *n*th order one-step kinetics, computer simulation, 209
mathematical model, switching device, artificial neuron, computer simulation, cyclic enzyme system, 39
mechanics, actomyocin, *Physarum*, autowaves, mathematical model, 269
meiosis, spindle, microtubules, spindle envelope, 5
metabolic oscillations, bistability, mitochondrial role in development, 255
metabolic regulation, acetylcholine level, substrate influx rates, non-steady-state behavior, computer simulation, 183
microbial evolution, oxygen toxicity, precambrian, 305
microtubules, spindle, meiosis, spindle envelope, 5
mitochondrial role in development, bistability, metabolic oscillations, 255
modelling, self-fertilizing and selection process of breeding, simulation, control, 291
MPF, cell cycle, cyclin, oscillator, 85

nitrogen fixation by symbiotic *Rhizobium*, density dependent diffusion, dispersal of populations, aggregation of populations, *Rhizobium* spp. motility, 223
non-archimedean model, local anesthetics, protein cross-linking, procaine, ionic channel, time scales, 91
non-steady-state behavior, metabolic regulation, acetylcholine level, substrate influx rates, computer simulation, 183
*n*th order one-step kinetics, blood oxygenation, lung capillaries, facilitated diffusion, mathematical model, oxygen dissociation curve, computer simulation, 209

optimum network topologies, parsimony algorithm, 16S-like rRNA sequences, 5S rRNA sequences, protistan interrelationships, 135
oscillations, limit cycle, Hpof bifurcation, 31
oscillator, cell cycle, MPF, cyclin, 85
oxygen dissociation curve, blood oxygenation, lung capillaries, facilitated diffusion, mathematical model, *n*th order one-step kinetics, computer simulation, 209
oxygen toxicity, microbial evolution, precambrian, 305

parsimony algorithm, 16S-like rRNA sequences, 5S rRNA sequences, optimum network topologies, protistan interrelationships, 135
predictive model, life expectancy curves, 119
peptide polymerization, enzyme kinetics, equilibrium solutions, 177
phase transition, speciation, bifurcation, evolution, 301
phylogeny, karyotype, cytotaxonomy, 157
Physarum, actomyocin, mechanics, autowaves, mathematical model, 269
pH gradient, hypothesis, electrophoretic sorting, structure of cytosol, 127
precambrian, microbial evolution, oxygen toxicity, 305
procaine, local anesthetics, protein cross-linking, ionic channel, non-archimedean model, time scales, 91

protein-folding, skew distribution, immune response, 261
protein cross-linking, local anesthetics, procaine, ionic channel, non-archimedean model, time scales,
protein phosphorylation, adaptation (molecular mechanism), adaptive evolution, 53
protistan interrrelationships, parsimony algorithm, 16S-like rRNA sequences, 5S rRNA sequences, optimum network topologies, 135
proton gradient, ferrocyanide, liposomes, 1

repetitive DNA, *Chlorella*, C_0t analysis, kinetic complexity, single copy DNA, thermal denaturation, 145
retinotectal connections, $\mathbf{S}^2$ space, vision, 25
Rhizobium spp. motility, density dependent diffusion, dispersal of populations, aggregation of populations, nitrogen fixation by symbiotic *Rhizobium*, 223

$\mathbf{S}^2$ space, retinotectal connections, vision, 25
5S rRNA sequences, parsimony algorithm, 16S-like rRNA sequences, optimum network topologies, protistan interrrelationships, 135
16S-like rRNA sequences, parsimony algorithm, 5S rRNA sequences, optimum network topologies, protistan interrrelationships, 135
self-fertilizing and selection process of breeding, modelling, simulation, control, 291
self-organization, computer biological modelling, cellular automata, 99
silicified stromatolite, *Bangia*, fossil rhodophyte, late Proterozoic microfossil, *Johannesbaptistia*, 245
simulation, self-fertilizing and selection process of breeding, modelling, control, 291
single copy DNA, *Chlorella*, C_0t analysis, kinetic complexity, repetitive DNA, thermal denaturation, 145
skew distribution, protein-folding, immune response, 261
speciation, phase transition, bifurcation, evolution, 301
sperm tails, *Spirochaeta halophila*, tektin and tektin-like proteins, undulipodia, axonemes, calmodulin, centrin, kinetids, kinetosome DNA, kinetosomes, 313
spindle, meiosis, microtubules, spindle envelope, 5
spindle envelope, spindle, meiosis, microtubules, 5
Spirochaeta halophila, tektin and tektin-like proteins, undulipodia, axonemes, calmodulin, centrin, kinetids, kinetosome DNA, kinetosomes, sperm tails, 313
stability, evolution, adaptive landscape, complexity, structuralism, evolvability, 61
stochastic simulation, cytokinetics, cell biology, 193
structuralism, evolution, adaptive landscape, stability, complexity, evolvability, 61
structure of cytosol, hypothesis, pH gradient, electrophoretic sorting, 127
substrate influx rates, metabolic regulation, acetylcholine level, non-steady-state behavior, computer simulation, 183
switching device, artificial neuron, mathematical model, computer simulation, cyclic enzyme system, 39

tektin and tektin-like proteins, undulipodia, axonemes, calmodulin, centrin, kinetids, kinetosome DNA, kinetosomes, sperm tails, *Spirochaeta halophila*, 313
thermal denaturation, *Chlorella*, C_0t analysis, kinetic complexity, repetitive DNA, single copy DNA, 145
time scales, local anesthetics, protein cross-linking, procaine, ionic channel, non-archimedean model, 91
travelling waves, density dependent diffusion, conflicting dynamics, aggregation of a bacterial population, *Escherichia coli* and *Streptococcus faecalis* radial growth, 215

undulipodia, axonemes, calmodulin, centrin, kinetids, kinetosome DNA, kinetosomes, sperm tails, *Spirochaeta halophila*, tektin and tektin-like proteins, 313

vision, retinotectal connections, $\mathbf{S}^2$ pace, 25
